

What A Finished Enlargement Looks Like

Left: 2" x 2" original with 1/4" grid. Right: 4x preview at 4" x 4" with 1" grid.

This IS the assignment scale (1 : 4). The full-size finished target is on the next page.

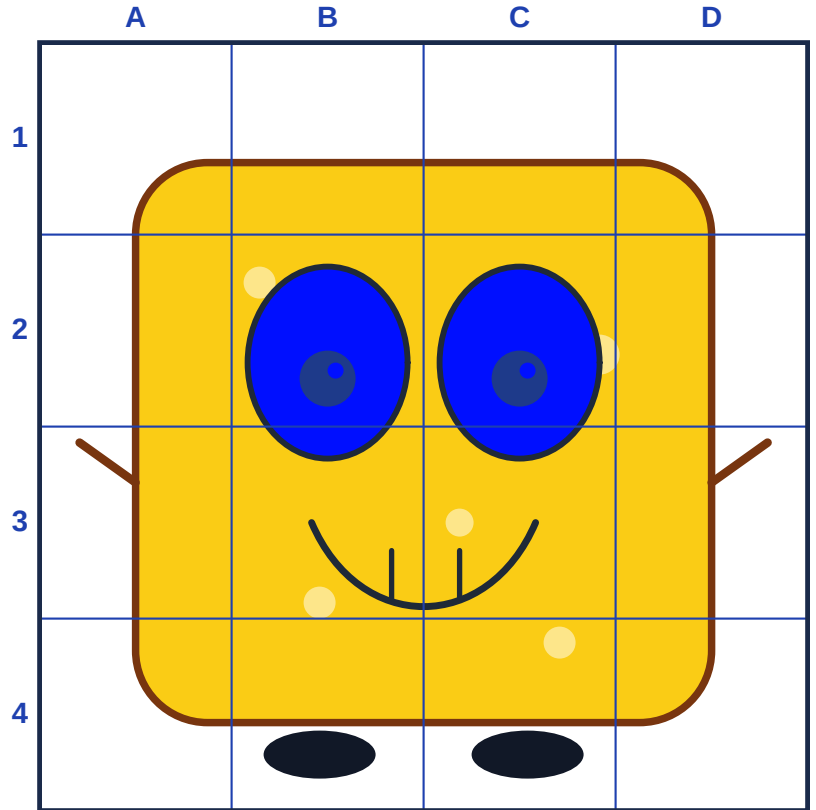

1. ORIGINAL

2" x 2" with 1/4" grid (8x8 cells)

2. FINISHED (4x enlargement)

4" x 4" with 1" grid (4x4 major cells)

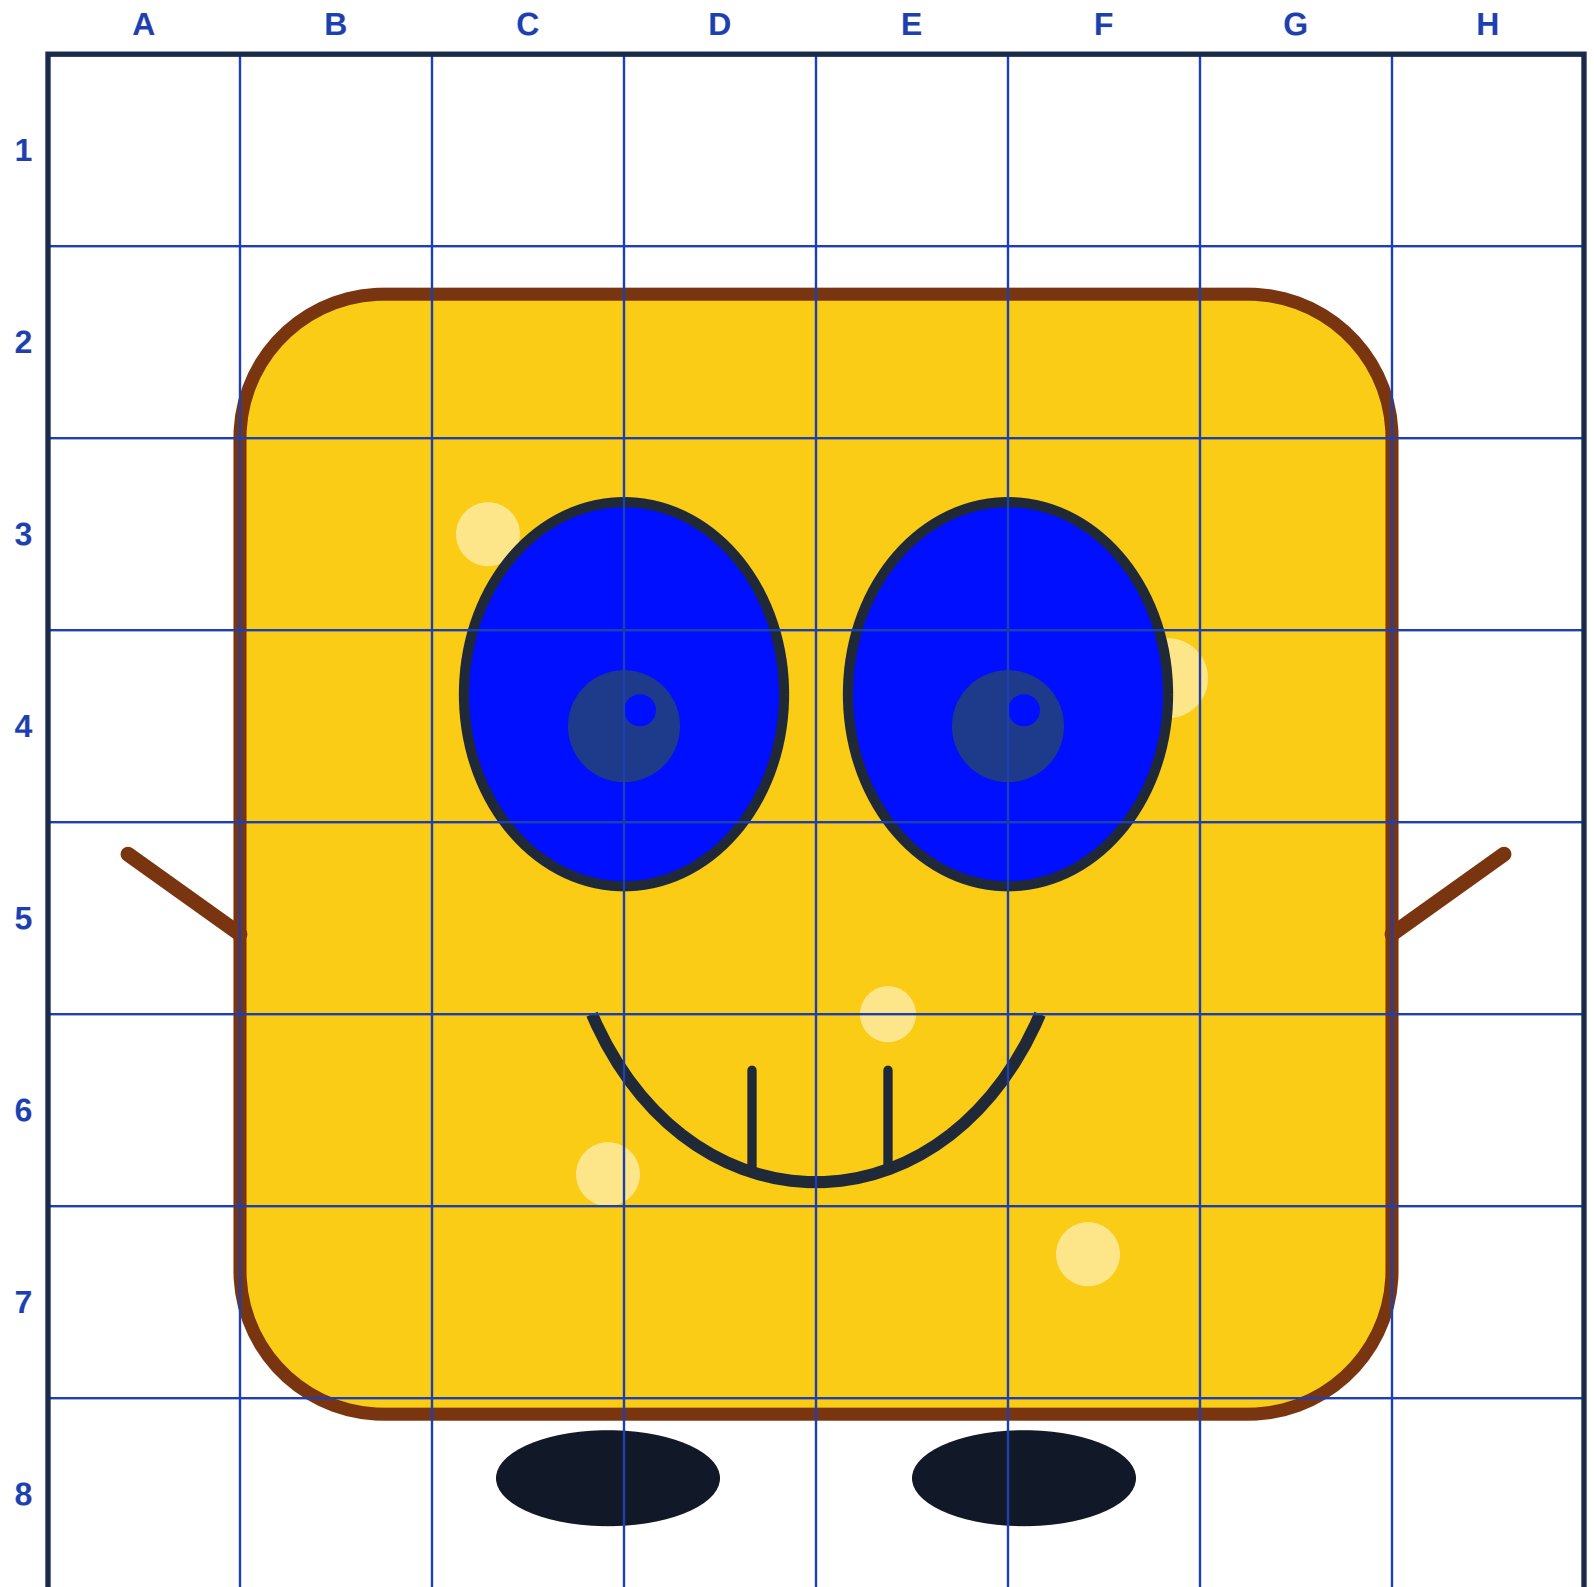

How to read this:

- Every 1/4-inch square on the LEFT maps to a 1-inch square on the RIGHT.
- Linear scale factor = 4 (each side is 4 times longer).
- AREA scale factor = 4 squared = 16 (each region is 16 times bigger).
- Whatever happens inside small square B2 must match inside big square B2 -- same relative position.

Finished Enlargement at Full 1 : 4 Scale

Real target for the assignment: 8" x 8" with 1" cells (8 x 8 = 64 cells). This is what a completed drawing looks like.

Compare each big square (B2, C3, etc.) to the same square on your 2" x 2" original.
