

Divisibility Rules

Quick tests to check if a number is divisible without doing long division.

Divisor	Rule	Example	Try it
2	The last digit is EVEN (0, 2, 4, 6, or 8).	574 → last digit is 4 ✓	Is 138? YES ■ NO ■
3	The SUM of the digits is divisible by 3.	417 → $4+1+7 = 12$ ✓	Is 255? YES ■ NO ■
4	The LAST TWO digits form a number divisible by 4.	728 → $28 \div 4 = 7$ ✓	Is 916? YES ■ NO ■
5	The last digit is 0 or 5.	365 → ends in 5 ✓	Is 740? YES ■ NO ■
6	Divisible by BOTH 2 and 3.	312 → even AND $3+1+2 = 6$ ✓	Is 126? YES ■ NO ■
8	The LAST THREE digits form a number divisible by 8.	5,240 → $240 \div 8 = 30$ ✓	Is 1,024? YES ■ NO ■
9	The SUM of the digits is divisible by 9.	738 → $7+3+8 = 18$ ✓	Is 234? YES ■ NO ■
10	The last digit is 0.	1,470 → ends in 0 ✓	Is 5,600? YES ■ NO ■

■ Tips & Combinations

- Divisible by 12? Check BOTH 3 and 4.
- Divisible by 15? Check BOTH 3 and 5.
- Divisible by 25? Look at the last TWO digits — must be 00, 25, 50, or 75.
- There's no easy rule for 7 — long division is usually fastest.
- A number divisible by 9 is ALSO divisible by 3 (but not the other way around).

■ Warm-Up Challenge

For the number 2,340, circle every divisor it's
