

What A Finished Enlargement Looks Like

Left: 2" x 2" original with 1/4" grid. Right: 4x preview at 4" x 4" with 1" grid.
Scale 4 shown here for compact preview; real assignment uses scale 1 : 8.

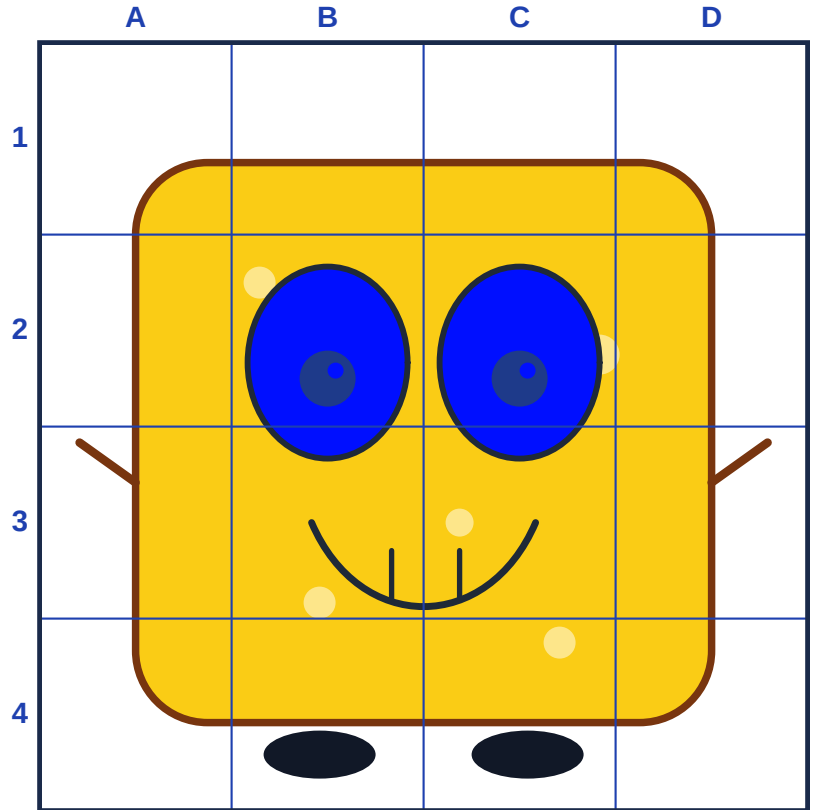

1. ORIGINAL

2" x 2" with 1/4" grid (8x8 cells)

2. FINISHED (4x enlargement)

4" x 4" with 1" grid (4x4 major cells)

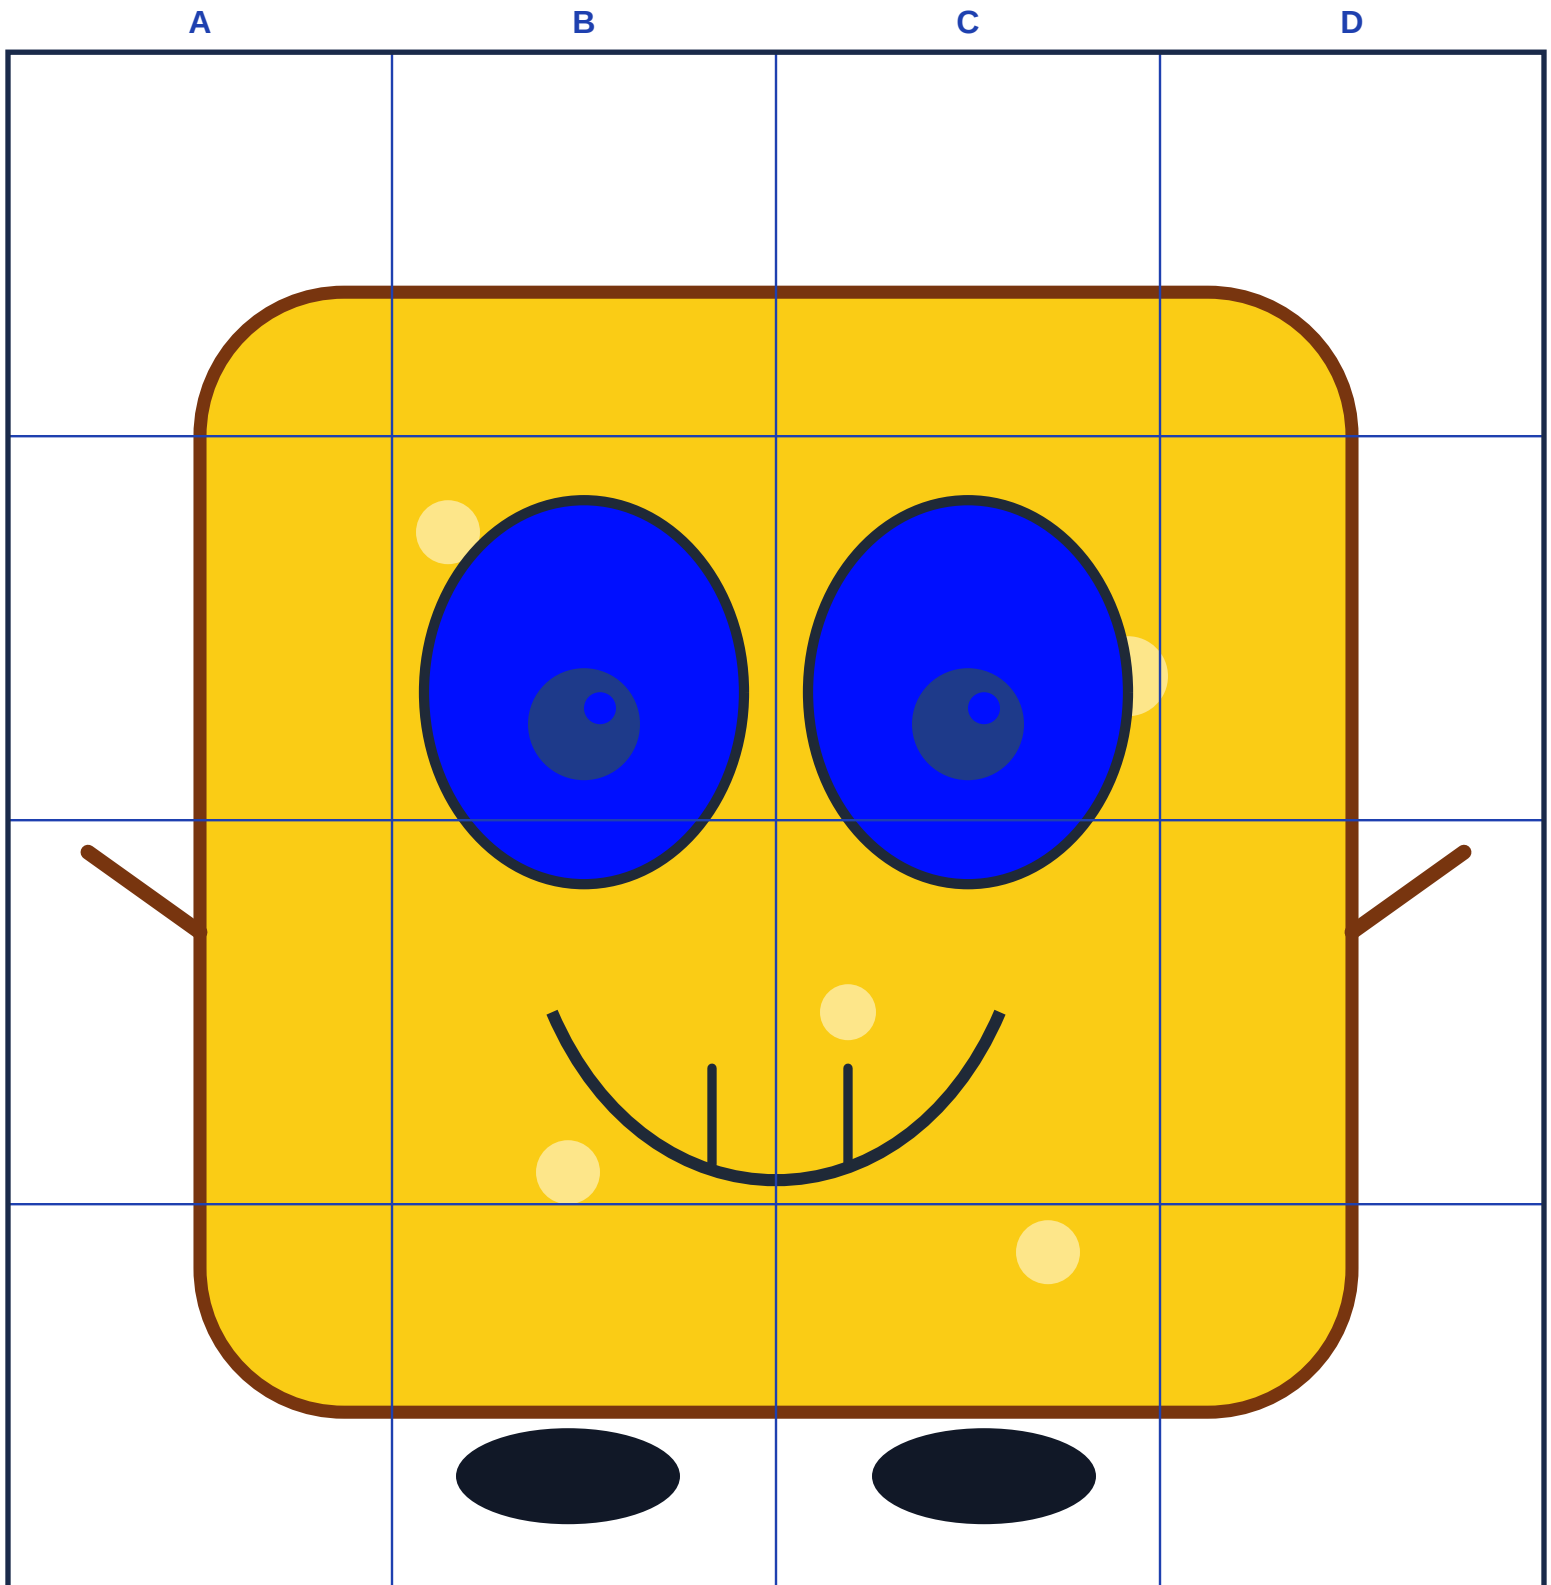

How to read this:

- Every 1/4-inch square on the LEFT maps to a 1-inch square on the RIGHT (16x more area).
- Whatever the drawing does inside small square B2 must match inside big square B2.
- The eye that touches the top of C2 on the original still touches the top of C2 on the enlargement.
- For your actual assignment the scale is 8 (not 4), so every 1/4" square becomes 2" -- 64x the area.

Finished Enlargement at Full 1 : 8 Scale

Real target for the assignment: 8" x 8" with 2" cells. This is what a completed drawing looks like.

Compare each big square (B2, C3, etc.) to the same square on your 2" x 2" original.
